LỜI NGỎ

Các bạn đang cầm trên tay cuốn sách Khoa học tuyệt vời nhất dành cho lứa tuổi Tiểu học. Tập một của quyển sách gồm có 16 bài với cấu trúc mỗi bài như sau:

- Bài học
- Từ mới
- Các câu hỏi trắc nghiệm và bài tập
- Bài tập về nhà

Quyển sách này rất phù hợp cho các em học sinh ôn thi vào lớp 6 trường chuyên Trần Đại Nghĩa, ngoài ra còn phù hợp cho:

- Học sinh các trường Quốc tế.
- Học sinh có mong muốn có một quyển sách với nội dung phù hợp và phong phú để ôn luyện các kỳ thi Khoa học Quốc tế như HKISO, CSO, IMSO
- Học sinh muốn nâng cao kiến thức môn Khoa học bằng tiếng Anh

Cuốn sách rất phù hợp với khả năng tự học hoặc dành cho các bậc Phụ huynh muốn kèm các em học ở nhà.

Cô mến chúc các em lúc nào cũng khỏe mạnh, vui vẻ và học tốt.

Sài Gòn, ngày 24 tháng 02 năm 2023

Tác giả

Cô Thúy

“Quyển sách này mẹ dành tặng con gái nhỏ Hải Linh của mẹ. Mẹ mong con sau này lớn lên trở thành một người tử tế, hạnh phúc, tự lập và trách nhiệm với bản thân cũng như với cộng đồng.”

Lưu ý: Cấm tất cả các hành vi sao chép nội dung của quyển sách khi chưa có sự đồng ý của Tác giả

Cô Thúy - 0904152091

UNIT 1. PLANT PARTS AND THEIR FUNCTIONS
CÁC BỘ PHẬN CỦA CÂY VÀ CHỨC NĂNG CỦA CHÚNG

1. Bài học

The main parts of a plant include:

- Roots
- Stems
- Leaves
- Flowers
- Fruits

Roots are the most important and underground part of a plant. They are the major part that anchors the plant firmly in the soil. They absorb water and minerals from the soil.

The stem is the part of the plant which is found above the ground. The bark of trees is brown in color and younger stems are green in color.

Leaves are the most important part of a plant. They contain chlorophyll that helps the plants to prepare their food using sunlight, carbon dioxide and water.

TRUNG TÂM LUYỆN THI TRẦN ĐẠI NGHĨA HẢI LINH
TÁC GIẢ: ĐÌNH THANH THÚY
GIÁO TRÌNH MÔN KHOA HỌC - LEVEL 1

Flowers are the most beautiful and colorful part of a plant. They are the reproductive part of a plant. A flower has four major parts, namely:

- **Petals:** It is the colorful part of a flower which attracts insects and birds.
- **Sepals:** Sepals are green leafy parts present under petals and protect the flower buds from damage.
- **Stamens:** This is the male part of the flower consisting of anther and filament.
- **Pistil:** This is the female part of the flower consisting of stigma, style and ovary.

Fruits provide a covering for seeds.

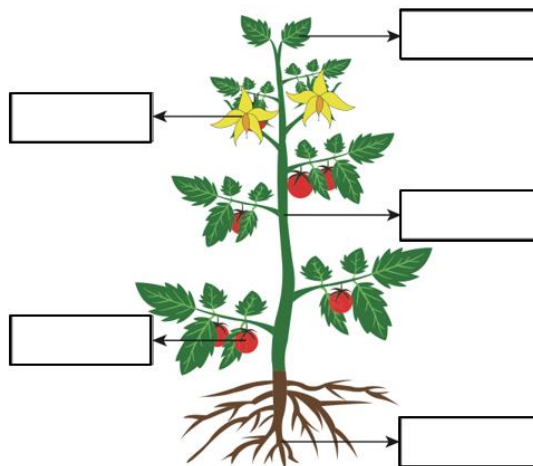

Seeds contain new plants. Seeds form in fruit.

2. Từ mới

word	meaning	word	meaning
the bark of tree	vỏ cây	prepare (v)	chuẩn bị
anchor (v)	giữ chặt	reproductive part	bộ phận sinh sản
absorb (v)	hấp thụ	provide (v)	cung cấp
contain (v)	chứa	cover (v)	bao phủ
chlorophyll (n)	chất diệp lục	major (a)	chính

3. Câu hỏi trắc nghiệm và bài tập

Exercise 1. Give the name of parts of the tree in the following figure:

TRUNG TÂM LUYỆN THI TRẦN ĐẠI NGHĨA HẢI LINH

Exercise 4. Choose the best answer:

Question 1. What is the function of the root?

- A. Absorb water and minerals from the soil.
- B. Made the plant's food.
- C. Cover the seeds.

Question 2. Where do plants make their own food?

- A. flowers
- B. roots
- C. leaves

Question 3. What does the stem of the plant do?

- A. It makes food for the plant
- B. It delivers water to the other parts of the plant
- C. It soaks up the water from the ground

Question 4. What gives plants the power to make their own food?

- A. the sun
- B. the insects
- C. the seeds

4. Bài tập về nhà

Question 3. What plant part is in the picture?

- A. trunk
- B. twig
- C. roots

Question 4. What plant part is in the picture?

- A. flowers
- B. seeds
- C. fruits

Question 5. How do leaves help the plants?

- A. They give plants the shade.
- B. This is where the plants make its food.
- C. Leaves absorb nutrients from the stem.

Question 6. What keeps the plant from breaking or falling?

- A. the leaves
- B. the roots
- C. the flowers

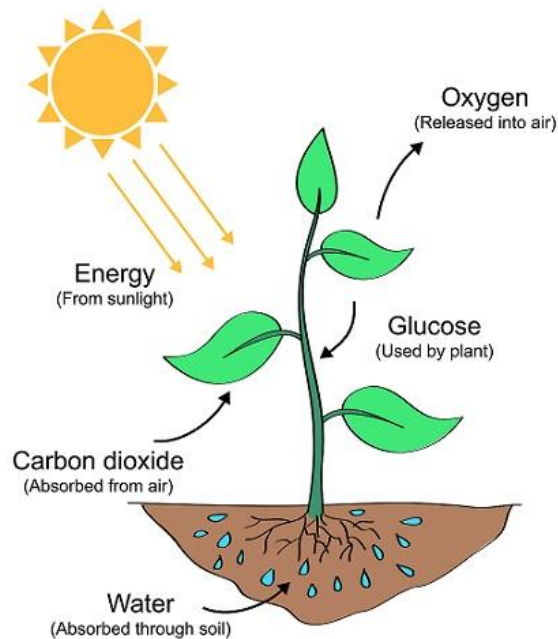

UNIT 2. PHOTOSYNTHESIS

HIỆN TƯỢNG QUANG HỢP

1. Bài học

Plants **make their food** using sunlight, water, carbon dioxide and nutrients and minerals from the soil to make glucose and oxygen. This process is called **photosynthesis**.

After photosynthesis, plants will **store the glucose** for their food and **release oxygen** into the atmosphere.

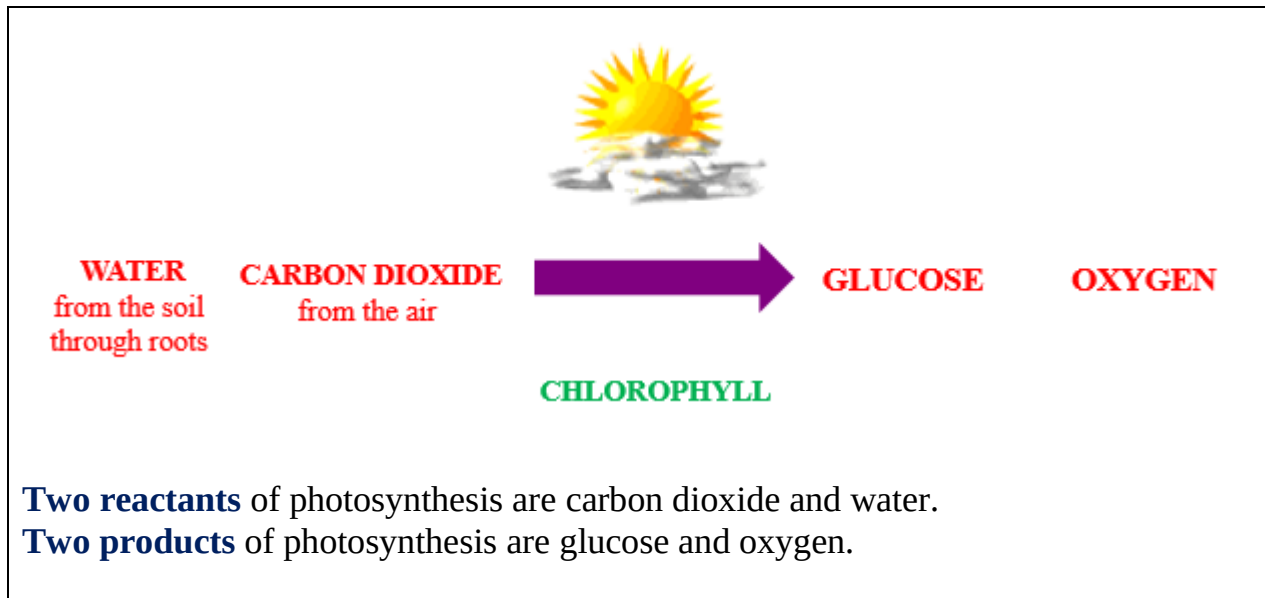

Chlorophyll, a green color pigment, present in leaves helps plant in absorbing energy of light.

The process of photosynthesis occurs in leaves. Thus leaves are called kitchen of plants or food factory of plants.

Plants leaves have small pores called as **stomata**. Plant exchange gases through stomata. Stomata are found on the underside of leaves.

Photosynthesis occurs when plants use light energy to convert carbon dioxide and water into glucose and oxygen.

C. nitrogen

D. carbon dioxide

Question 4. During the process of photosynthesis, which of the following conversion takes place?

A. Chemical energy converted to electrical energy

B. Wind energy converted to chemical energy

C. Chemical energy converted to light energy

D. Light energy converted to chemical energy

Question 5. Which statement about photosynthesis is correct?

A. Plants get the energy they need for photosynthesis from water.

B. Plants get the energy they need for photosynthesis from soil.

C. Plants get the energy they need for photosynthesis from sunlight.

D. Plants do not require energy to perform photosynthesis.

Question 6. Which of the following gases does a plant absorb during photosynthesis?

A. oxygen

B. carbon dioxide

C. hydrogen

D. helium

Exercise 2. What drives the photosynthesis?

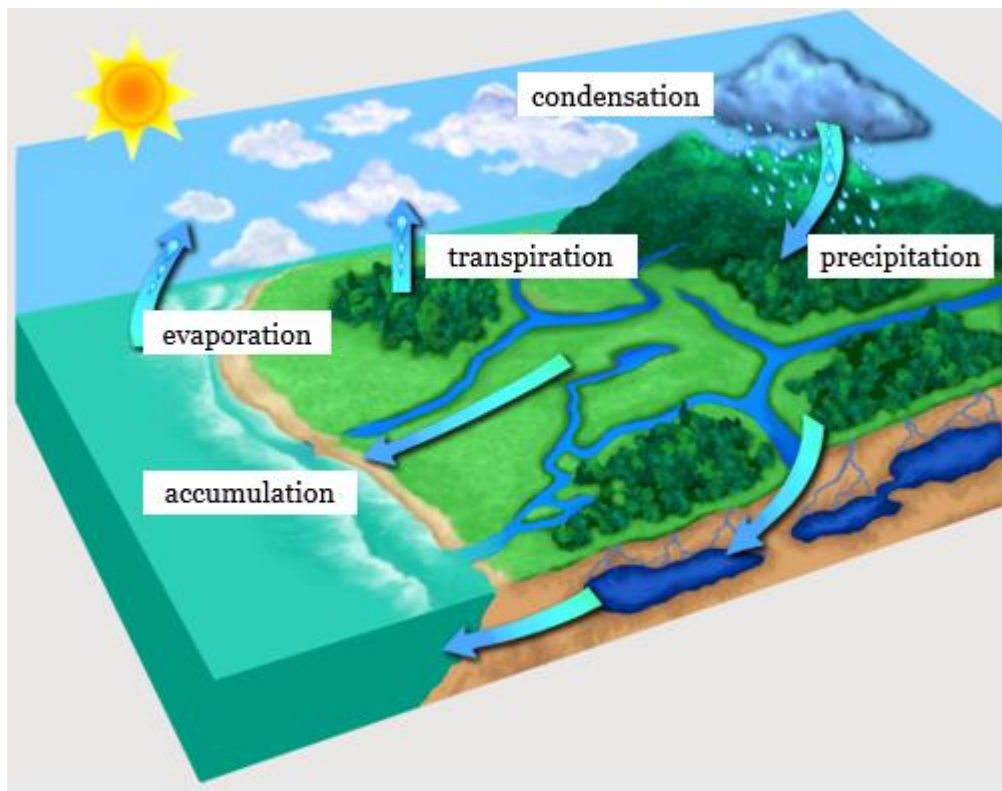

Write your answer here:

UNIT 3. WATER CYCLE

VÒNG TUẦN HOÀN NƯỚC

1. Bài học

There are four main stages in the water cycle. They are evaporation, condensation, precipitation and accumulation. Let's look at each of these stages.

Evaporation: This is when warmth from the sun causes water from oceans, lakes, streams, ice and soils to rise into the air and turn into water vapor (gas).

Condensation: This is when water vapor in the air cools down and turns back into liquid water.

Precipitation: This is when water (in the form of rain, snow, hail or sleet) falls from clouds in the sky.

TRUNG TÂM LUYỆN THI TRẦN ĐẠI NGHĨA HẢI LINH
TÁC GIẢ: ĐINH THANH THÚY
GIÁO TRÌNH MÔN KHOA HỌC - LEVEL 1

Accumulation or collection: This is when water that falls from the clouds as rain, snow, hail or sleet, collects in the oceans, rivers, lakes, streams. Most will infiltrate (soak into) the ground and will collect as underground water.

The water cycle is powered by the sun's energy and by gravity. The sun heats up all the Earth's water and makes it evaporate. Gravity makes the moisture fall back to Earth.

2. Từ mới

word	meaning	word	meaning
solid (n)	chất rắn	transpiration (n)	sự thoát hơi nước
liquid (n)	chất lỏng	condensation (n)	sự ngưng tụ
gas (n)	chất khí	precipitation (n)	giáng thủy
melt(v)	tan chảy	run-off (n)	dòng chảy bề mặt
freeze(v)	đông lại	sleet (n)	mưa tuyết
condense (v)	ngưng tụ	hail (n)	mưa đá
evaporation (n)	sự bay hơi	evaporate (v)	bay hơi
water vapor	hơi nước	accumulation (n)	sự tích tụ
aquifers (n)	tầng chứa nước	no longer	không còn nữa
droplet (n)	giọt nước	infiltrate (v)	thấm nước
gravity (n)	trọng lực	soak into (v)	thấm nước

3. Câu hỏi trắc nghiệm và bài tập

Exercise 1. Choose the best answer:

Question 1. Which of the following takes place when the sun heats up the waters in oceans, lakes, rivers to convert water into water vapor?

- A. Condensation
- B. Transpiration
- C. Evaporation

TRUNG TÂM LUYỆN THI TRẦN ĐẠI NGHĨA HẢI LINH
TÁC GIẢ: ĐINH THANH THÚY
GIÁO TRÌNH MÔN KHOA HỌC - LEVEL 1

D. Precipitation

Question 2. Which of the following is the process by which plants lose water in the form of water vapor?

A. Condensation

B. Transpiration

C. Evaporation

D. Precipitation

Question 3. Which of the following occurs when the water vapor in the air becomes cold and changes back into liquid water?

A. Condensation

B. Transpiration

C. Evaporation

D. Precipitation

Question 4. Which of the following is rain, snow, sleet, or hail that falls to the ground and occurs when air can no longer hold water droplets?

A. Condensation

B. Transpiration

C. Evaporation

D. Precipitation

Question 5. Cloud information is an example of condensation because

A. Liquid water is converted into its gaseous state.

B. Water vapor condenses around particles in the atmosphere.

C. Liquid water falls as rain, sleet, snow or ice.

D. Water is absorbed into the ground.

Question 6. Which of the following are underground layers of rock that absorb precipitation that falls to the Earth?

A. Runoff

B. Ground water

TRUNG TÂM LUYỆN THI TRẦN ĐẠI NGHĨA HẢI LINH

Question 3. When water _____, dew forms in leaves at night.

- A. Melts
- B. Evaporates
- C. Condenses
- D. Precipitates

Question 4. On which kind of day would you expect the most evaporation from the surface of a pond?

- A. cold, rainy
- B. cold, sunny
- C. warm, rainy
- D. warm, sunny

Question 5. Where is most water found on Earth?

- A. glaciers
- B. lakes
- C. rivers
- D. oceans

Question 6. Why does precipitation happen?

- A. because clouds no longer hold heavy droplets.
- B. because of evaporation caused by the sun.
- C. because the dew formed in the leaves.

UNIT 4. CONDUCTORS AND INSULATORS

CHẤT DẪN ĐIỆN VÀ CHẤT CÁCH ĐIỆN

1. Bài học

A conductor, or electrical materials, is a substance or material that allows electricity to flow through it.

Pure elemental silver is one of the best electrical conductors. Other good electrical conductors include the following:

- copper
- steel
- gold
- silver
- platinum
- aluminium
- brass

Human beings are also good conductors of electricity, which is why touching someone experiencing an electric shock causes the toucher to experience the same shock.

Insulators or dielectric materials are the materials that don't allow electrical current or heat to pass through them. Most insulators are solid in nature. Examples include the following:

- wood
- fabric
- glass
- mica
- plastic
- porcelain
- rubber

2. Từ mới

- A. Brass
- B. Porcelain
- C. Wood
- D. Aluminium

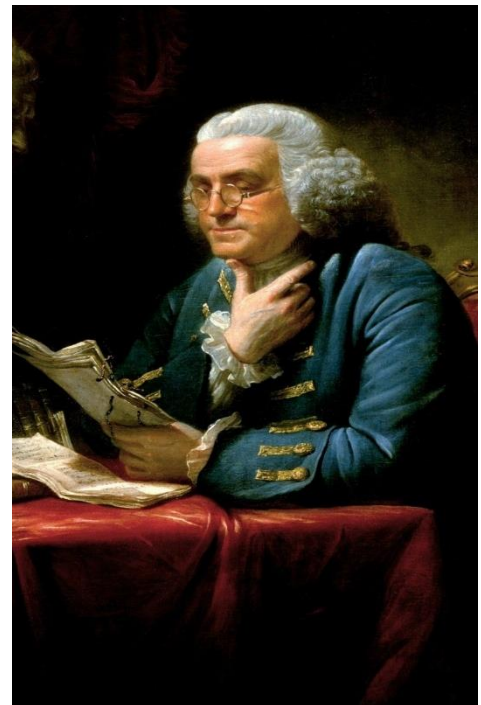

BROADEN YOUR KNOWLEDGE

BENJAMIN FRANKLIN, THE GREAT SCIENTIST

Benjamin Franklin was a famous American writer, statesman, inventor and one of the Founding Fathers of the United States — he was part of the drafting of the Declaration of Independence.

Franklin started exploring electricity and proposed an experiment to prove that lightning was electricity by flying a kite in a thunderstorm. This experiment involved using an iron rod and extracting electrical sparks from a storm cloud. Terms used today, such as battery, charge, conductor and electrify, were first formulated by Franklin.

- D. Glass

Question 3. Answer the following question:

Which one of these is an insulator?

plastic bottle

drawing pin

drinks can

magnet

ball of string

safety pin

UNIT 5. MAGNETS

NAM CHÂM

1. Bài học

Magnetism is a fascinating invisible force – it influences the environment around it. A magnet is a material that can pull certain types of metal towards itself.

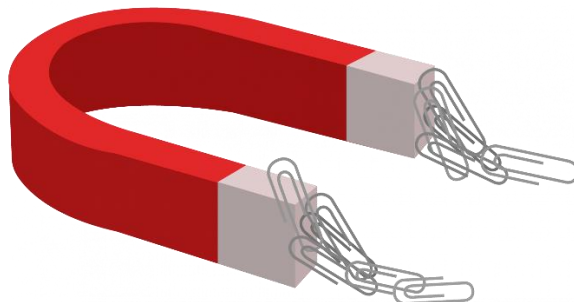

A magnet creates an invisible area of **magnetism** all around it called a **magnetic field**.

The north pole of a magnet is generally considered to be negative, and **the south pole** of a magnet is considered to be positive. If a bar magnet is broken into two pieces in an attempt to separate the poles, the result will be two smaller bar magnets, each of which has both a north and south pole. Magnetic forces flow from the north pole to the south pole, creating a magnetic field.

Two opposite poles will **attract** each other, and two same poles (two north poles or two south poles) will **push apart or repel**. So we have the common saying: like poles repel, unlike poles attract.

Metals are easily attracted by a magnet like the following figure:

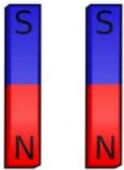

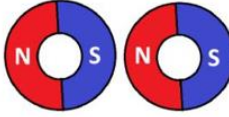

TRUNG TÂM LUYỆN THI TRẦN ĐẠI NGHĨA HẢI LINH

Exercise 4. Mr. Washington mixed iron filings with sand. Then, he asked his students to separate the iron filings from the sand. Which of the following is the best tool to use to separate the iron filings from the sand?

- A. Hand Len
- B. Bar Magnet
- C. Test Tube
- D. Eye dropper

UNIT 6. REVIEW 1

ÔN TẬP ĐỊNH KỲ LẦN 1

Question 1. The water cycle starts in the

- A. oceans
- B. clouds
- C. plants and animals
- D. It has no starting place and ending place

Question 2. The water cycle is driven by the

- A. sun
- B. moon
- C. clouds
- D. oceans

Question 3. When water changes into water vapor and moves into the air, it is called _____.

- A. Accumulation
- B. Precipitation
- C. Condensation
- D. Evaporation

Question 4. Where does precipitation begin to form?

- A. In lakes
- B. In oceans
- C. Under the ground
- D. In clouds

Question 5. What is the correct order of the water cycle?

- A. cloud, water vapor, rain,
- B. water vapor, cloud, rain
- C. rain, cloud, water vapor
- D. water vapor, rain, cloud

Question 6. Khang is learning about digestive system in science class. The digestive system is a complex series of organs that convert food into energy and basic nutrients to feed the entire body. Which of the following options is the correct order of human digestive system?

- A. esophagus → liver large → intestine → small intestine
- B. stomach → esophagus → large intestine → small intestine

GIÁO TRÌNH MÔN KHOA HỌC - LEVEL 1

- A. wind
- B. sun
- C. petals
- D. roots

Question 10. Which plant part collects the sun's energy and makes food?

- A. Leaf
- B. Stem
- C. Roots
- D. Flower

Question 11. Which of these is NOT A TRUE statement about why photosynthesis is important:

- A. It captures and makes the sun's energy available to all species
- B. It turns carbon dioxide into oxygen for us to breath
- C. It helps plants create energy to send to rest of food chain
- D. It makes the water for our planet

Question 12. Fill in the blank with suitable words of photosynthesis process.

Plants make their own food during _____ .
The process of photosynthesis occurs in the _____
of plants.
_____ are green pigments that give plants
their green color. You will find chlorophyll in the
chloroplasts and they help plants absorb the _____
from the sun.

BÀI KIỂM TRA ĐỊNH KỲ LẦN 1

THIS PAGE IS BLANK FOR PURPOSE

UNIT 8. BUTTERFLY CYCLE VÒNG ĐỜI CỦA CON BƯỚM

1. Bài học

All butterflies have “complete metamorphosis.” To grow into an adult, they go through 4 stages: egg, caterpillar (larva), chrysalis (pupa) and adult. Depending on the type of butterfly, the life cycle of a butterfly may take from one month to a whole year.

The Egg: The First Stage

Eggs are **laid on plants** by the adult female butterfly. These plants will then become the food for the hatching caterpillars.

Eggs can be laid from spring, summer or fall. This depends on the species of butterfly. Females lay a lot of eggs at once so that at least some of them survive.

Caterpillar: The Feeding Stage

The next stage is the **larva**. This is also called a caterpillar if the insect is a butterfly or a moth.

The job of the caterpillar is to eat and eat and eat. As the caterpillar grows it splits its skin and sheds it about 4 or 5 times. Caterpillars can grow 100 times their size during this stage. For example, a monarch butterfly egg is the size of a pinhead and the caterpillar that hatches from this tiny egg isn't much bigger. But it will grow up to 2 inches long in several weeks.

Pupa: The Transition Stage

When the caterpillar is full grown and stops eating, it becomes a pupa. The pupa of butterflies is also called a chrysalis.

The pupa of many moths is protected inside a cocoon of silk.

This stage can last from a few weeks, a month or even longer. Some species have a pupal stage that lasts for two years.

Adult: The Reproductive Stage

The adults have long legs, long antennae, and compound eyes. They can also fly by using their large and colorful wings. The one thing they can't do is grow.

Most adult butterflies live only one or two weeks, but some species hibernate during the winter and may live several months.

C. 5 stages

Question 2. The _____ comes out of the egg.

A. chrysalis

B. adult butterfly

C. egg

D. larva/caterpillar

Question 3. Butterflies can live up to several years.

A. True

B. False

Question 4. How long does the caterpillar stay in the pupa?

A. One day

B. One month

C. 3 weeks

D. 2 weeks

Question 5. A caterpillar eats a lot before wrapping itself in a cocoon.

A. True

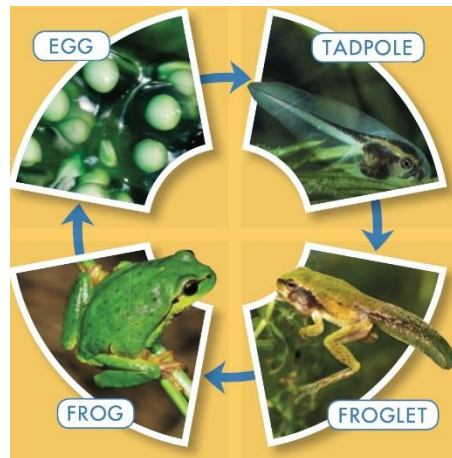

B. False

UNIT 9. FROG CYCLE VÒNG ĐỜI CỦA CON ẾCH

1. Bài học

Frogs are amphibians, which means that they can live in water or on land. They go through several stages of life before they become adult frogs and during those stages, they live only in water.

Stage 1: Egg

A female frog lays a lot of eggs at one time in a pond. The eggs float on water in a cluster. The eggs will soon hatch into tadpoles in one to three weeks!

Stage 2: Tadpole

When the tadpole hatches, it looks more like a fish than a frog. It doesn't have any legs! It has gills that allow it to breathe underwater. The tadpole swims, eats plants and algae from the water, and grows for several weeks.

During this time, the tadpole starts to develop lungs so it will be able to breathe out of the water when it becomes a frog. The tadpole also starts to grow two hind legs. Now it can leap around instead of only swimming. Although the tadpole is starting to look a little more like a frog, it still has a very long tail!

Stage 3: Young Frog

The tadpole grows two front legs and its long tail becomes shorter and shorter. The tadpole uses the nutrients stored in its tail as food, so until its tail is completely gone, it doesn't need anything else to eat!

Stage 4: Adult Frog

The frog's tail will eventually disappear completely and it will start to eat insects instead of plants from the water. The young frog will grow for about 2-4 years to become an adult. The adult frogs then lay their eggs and more tadpoles hatch and begin the cycle again!

UNIT 10. STATES OF WATER
CÁC TRẠNG THÁI CỦA NƯỚC

1. Bài học

Water is known to exist in three different states; as a solid, liquid or gas. Pure water is tasteless, odorless, and colorless. Water can occur in three states: solid (ice), liquid, or gas (vapor).

The 3 types of phase changes for water are:

EVAPORATION: When water is in a liquid state, it can evaporate into a gas or also called water vapor.

MELTING: If water is in a frozen state then you add heat, it melts and turns into a liquid again.

CONDENSATION: When water vapor in the air condenses, it turns back into a liquid such as in the form of rain.

The water vapor attaches to small bits of dust in the air. It forms raindrops in warm temperatures. In cold temperatures, it freezes and forms snow or hail.

2. Từ mới

B. Evaporation

C. Freezing

D. Melting

Question 4. _____ means water changes from its gaseous state to liquid state.

A. Condensation

B. Evaporation

C. Boiling

D. Freezing

Question 5. In which area would the rate of evaporation be the lowest?

A. Over the ocean

B. Over the mountains

C. Over the rainforest

D. Over the desert

Question 6. Hail, sleet, snow and rain are examples of:

A. Condensation

B. Evaporation

C. Precipitation

D. Transpiration

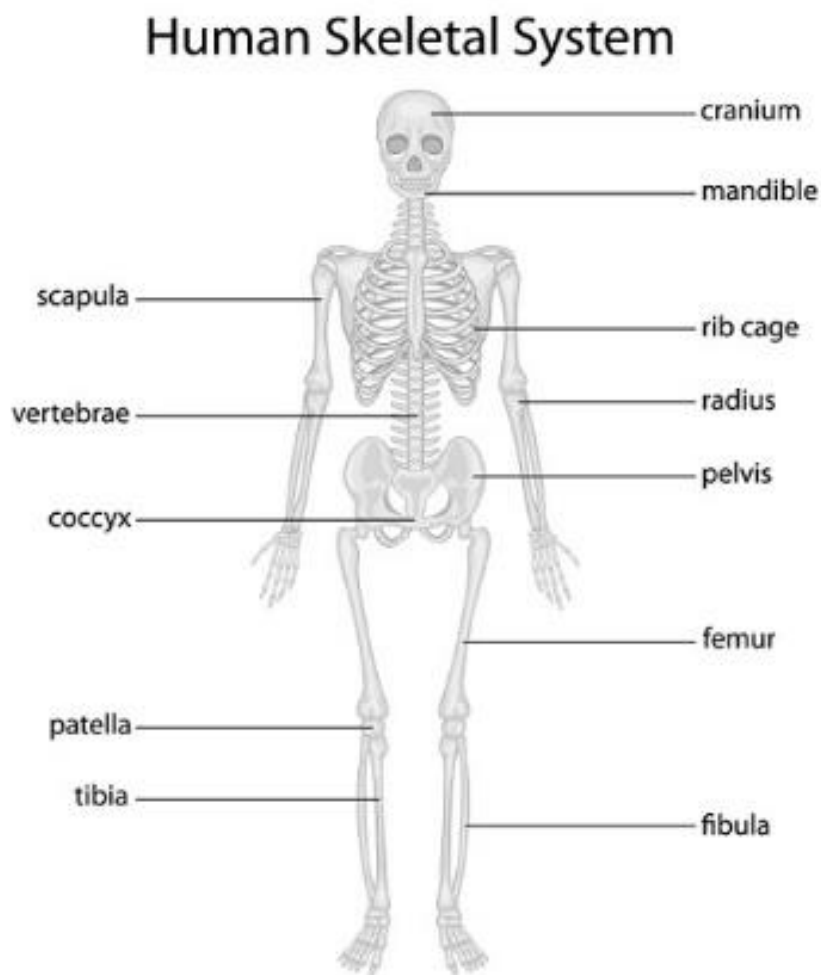

UNIT 11. HUMAN BODY ORGANS – PART I

CÁC HỆ CỦA CƠ THỂ NGƯỜI – PHẦN I

1. Bài học

A. Skeletal System

The system of bones and joints is known as skeletal system. It gives shape and support to our body.

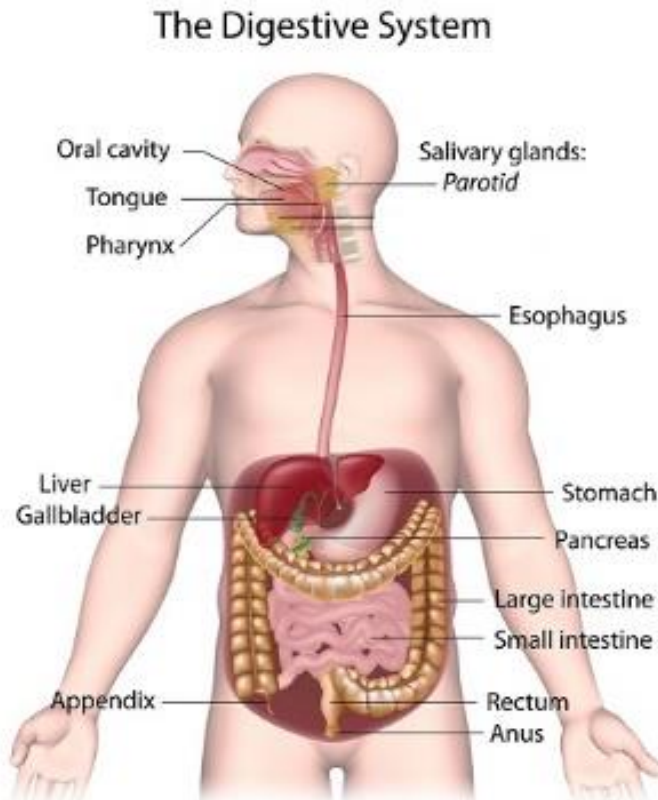

Human infants have more than 300 bones initially. Over the time many of these bones merge together. By the age of nine most humans have 206 bones. Thus an adult human has 206 bones.

The largest bone in human body is femur or thighbone.

The smallest bone is in your ear.

B. Digestive System

The digestive system consists of the parts of the body that work together to turn food and liquids into the building blocks and fuel that the body needs.

Mouth

The mouth is the first digestive organ that food enters. Your body starts with the release of saliva. Saliva wets the food, which makes it easier to break up and swallow.

Esophagus

The esophagus is a long, narrow tube that carries food from the back of your mouth to the stomach.

Stomach

It helps break the food into smaller pieces. It also helps mix the food with special chemicals that further aid the breaking down of food into nutrients.

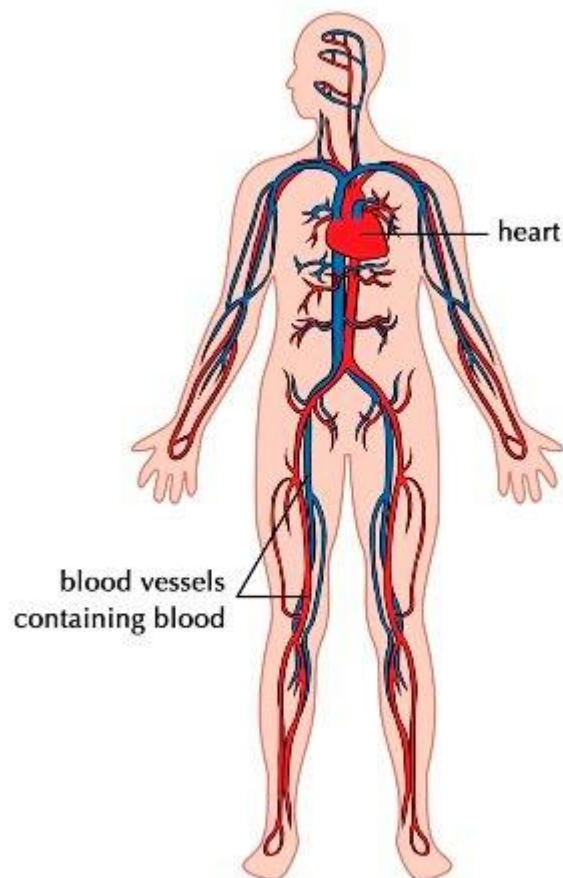

The Small Intestine

The small intestine is a narrow tube that starts at the stomach and ends at the large intestine. Most chemical digestion, and almost all nutrient absorption, takes place in the small intestine.

The Large Intestine

The large intestine is the last section of the digestive tract. It is a wide tube that connects to the small intestine. The large intestine carries the remaining food out of the body as waste.

C. Circulatory system

The circulatory system plays a very important role in keeping the body healthy. The heart is an important part of this system because it pumps blood around your body and keeps the circulatory system flowing. Blood is used to transport oxygen around your body, which all of your body's cells need in order to survive.

The four main parts of the circulatory system are the heart, arteries, veins and blood.

TRUNG TÂM LUYỆN THI TRẦN ĐẠI NGHĨA HẢI LINH
TÁC GIẢ: ĐINH THANH THÚY
GIÁO TRÌNH MÔN KHOA HỌC - LEVEL 1

The heart

Its job is to pump persistently and to ensure the circulatory system is working all of the time.

The arteries

They are blood vessels which transport oxygen-rich blood away from the heart and towards tissues in the body.

The veins

They are blood vessels that carry blood to the heart. This blood comes from your tissues where it has been deoxygenated. Veins also carry blood towards the lungs to give them oxygen.

Blood carries almost everything within the body, transporting hormones, nutrients, oxygen to keep the body healthy.

UNIT 12. HUMAN BODY ORGANS – PART II

CÁC HỆ CỦA CƠ THỂ NGƯỜI – PHẦN II

1. Bài học

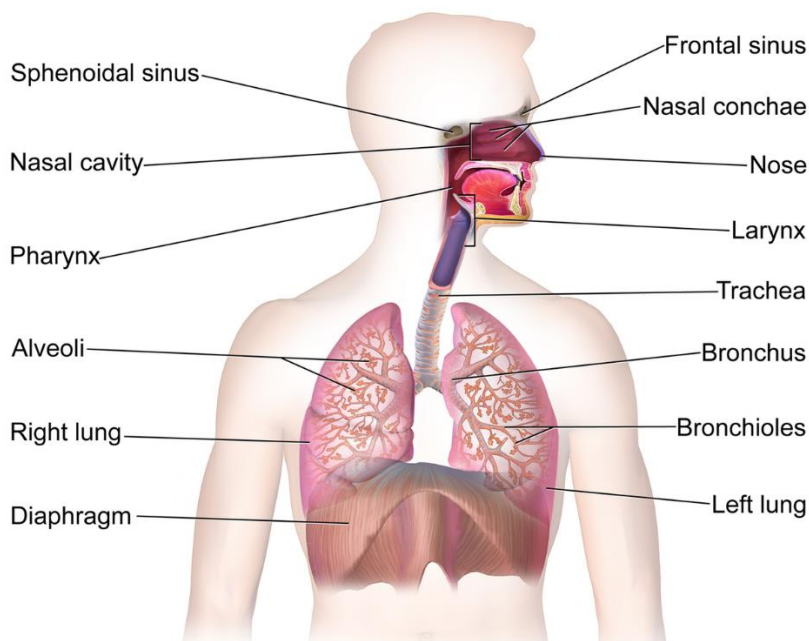

Respiratory System

The lungs and respiratory system allow us to breathe. They:

Bring **oxygen into** our bodies (called **inhalation**).

Send **carbon dioxide out** (called **exhalation**).

This exchange of oxygen and carbon dioxide is called **respiration**.

The Respiratory System

The respiratory system includes:

the nose

mouth

pharynx

larynx

trachea

lungs

How does the respiratory system work?

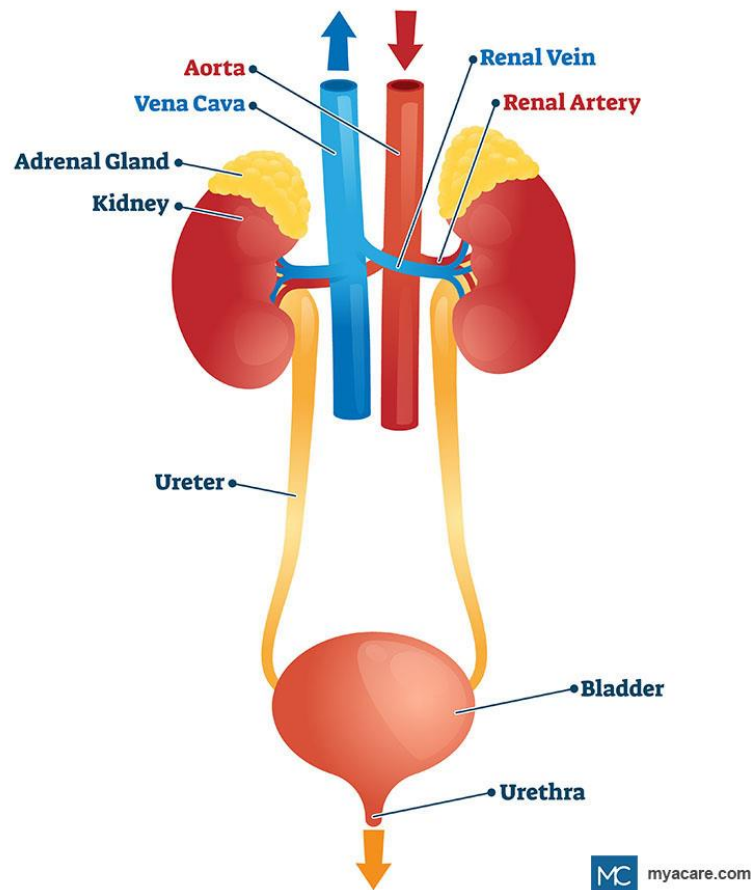

When you inhale (breathe in), air enters your lungs, and oxygen from that air moves to your blood. At the same time, carbon dioxide, a waste gas, moves from your blood to the lungs and is exhaled (breathed out). This process, called gas exchange, is essential to life.

Excretory System

Your body needs water to survive. If you went more than a couple of days without water, you would be very thirsty and your cells would not be able to keep functioning.

Your body has a similar filtering system called the excretory system. The excretory system filters the blood to remove wastes that could be harmful to the body.

EXCRETORY SYSTEM

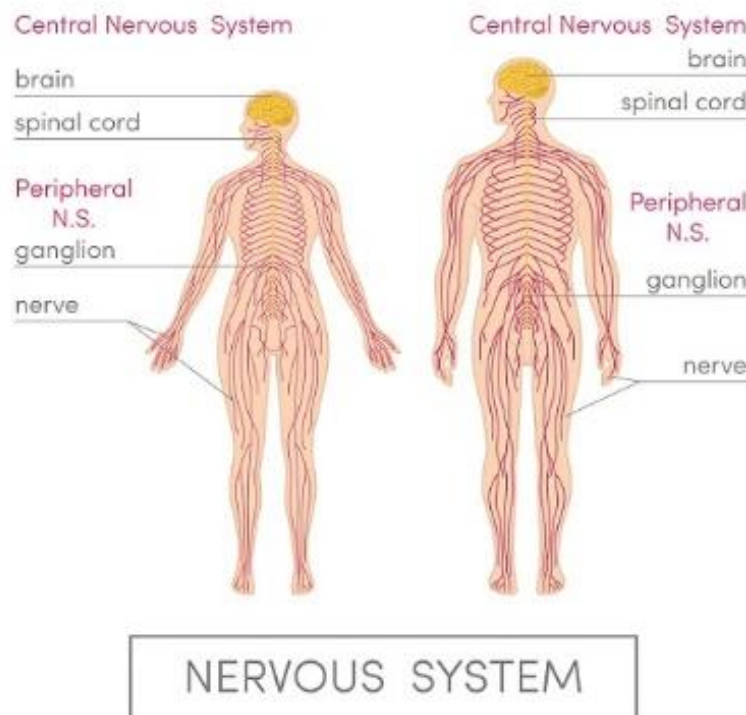

There are four main parts that make up the excretory system: the kidneys, ureters, bladder, and urethra.

Nervous System

The nervous system controls our body. Our sensory organs work with the help of nervous system. The nervous system is responsible for communication between different body parts.

The nervous system consists of the brain, spinal cord, sensory organs, and nerves. Nerves connect sensory organs with different parts of the body. Neurons are nerve cells.

The brain is the most important part of our nervous system.
The brain and spinal cord comprise the central nervous system (CNS).

Nerves are like wires which transmit communication signals between the brain and body parts. Nerve comprises of nerve cells. A nerve cell is called neuron.

Question 19. Is a squid a vertebrate?

- A. Yes B. No

Question 20. Are starfish vertebrates?

- A. Yes B. No

Question 21. Select the one that doesn't belong in the same group

- A. birds
B. mammals
C. insects
D. reptiles

Question 22. What is the smallest group of animals?

- A. reptiles B. insects
C. birds D. fish

Question 23. What is the largest group of animals?

- A. birds
B. fish
C. reptiles
D. insects

Question 24. Write T for True and F for False

When cooling water, liquid water changes into solid water

--

A glacier is created by Sun

Page 10

Water has only two states: solid and liquid

Condensations create water vapor

Page 10 of 10

Precipitation consist of rain, snow, sleet, hail

Page 10 of 10

Question 25. What happens when you breath in?

- A. Oxygen is taken in
B. Carbon dioxide is released
C. Oxygen is released

TRUNG TÂM LUYỆN THI TRẦN ĐẠI NGHĨA HẢI LINH
TÁC GIẢ: ĐINH THANH THÚY
GIÁO TRÌNH MÔN KHOA HỌC - LEVEL 1

D. Carbon dioxide is taken in

Question 26. The system that includes the heart, veins, and arteries is the ____.

- | | |
|----------------|--------------|
| A. nervous | B. digestive |
| C. circulatory | D. muscular |

Question 27. Healthy lungs should be the color ____.

- | | |
|-----------|----------|
| A. brown | B. white |
| C. orange | D. pink |

Question 28. The reason the large intestine is called large is because ...

- A. it is puffy
- B. it takes up a larger space
- C. it is the longest.
- D. its diameter is larger

Question 29. The main responsibility of breaking food down into smaller pieces belongs to the ____ system.

- | | |
|-------------|----------------|
| A. nervous | B. circulatory |
| C. skeletal | D. digestive |

Question 30. The system responsible for moving different parts of the body is the ____ system.

- | | |
|--------------|-------------|
| A. muscular | B. skeletal |
| C. digestive | D. nervous |

UNIT 14. THE SECOND FINAL TEST

BÀI KIỂM TRA ĐỊNH KỲ LẦN 2

THIS PAGE IS BLANK FOR PURPOSE

UNIT 15. FOOD CHAIN AND FOOD WEB

CHUỖI THỨC ĂN VÀ LƯỚI THỨC ĂN

1. Bài học

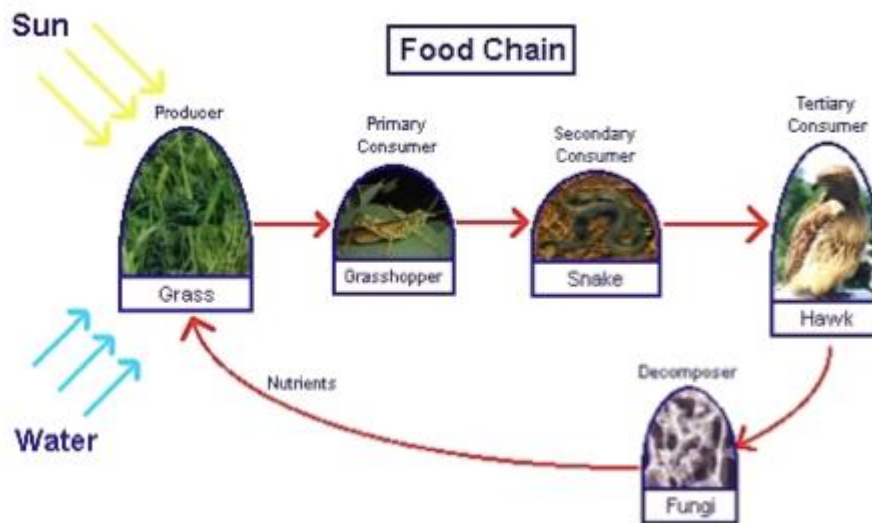

Here is the list of words that you need to know.

producer	consumer	food chain	predator
carnivore	herbivore	omnivores	prey
primary consumer	secondary consumer		

A. FOOD CHAIN

A food chain shows how each living thing gets its food.

Example:

Plants are called **producers** because they are able to use light energy from the sun to produce food (sugar) from carbon dioxide and water. Animals cannot make their own food so they must eat plants and/or other animals. They are called **consumers**.

There are three groups of consumers.

1. Herbivores: animals that eat only plants

Zebra is a herbivore

2. Carnivores: animals that eat other animals.

Carnivores that eat herbivores are called secondary consumers, and carnivores that eat other carnivores are called tertiary consumers.

Lion is a carnivore

3. Omnivores: animals and people who eat both animals and plants.

Pig is an omnivore

Decomposers (bacteria, fungi, and even some worms), which feed on decaying matter. These decomposers speed up the decaying process that releases minerals into the soil.

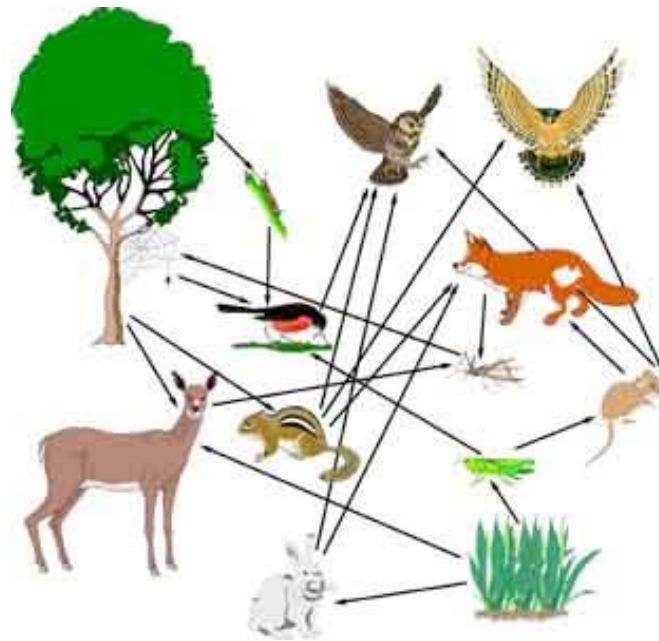

bacteria

fungi

B. FOOD WEB

A network of interconnected food chains in the same ecosystem is called a food web.

TRUNG TÂM LUYỆN THI TRẦN ĐẠI NGHĨA HẢI LINH
TÁC GIẢ: ĐÌNH THANH THÚY
GIÁO TRÌNH MÔN KHOA HỌC - LEVEL 1

A food web may have multiple producers and consumers.

2. Từ mới

words	meaning	explain	example
producer	sinh vật sản xuất	sinh vật tự tạo thức ăn thông qua quá trình quang hợp và bắt đầu một chuỗi thức ăn	plant
consumer	sinh vật tiêu thụ	sinh vật phải ăn mới có năng lượng để sống	rabbit, fox, hawk
primary consumer	sinh vật tiêu thụ sơ cấp	sinh vật ăn sinh vật sản xuất	rabbit, grasshopper
secondary consumer	sinh vật tiêu thụ thứ cấp	sinh vật ăn sinh vật tiêu thụ sơ cấp	hawk, fox
carnivore	động vật ăn thịt	sinh vật chỉ ăn thịt	lion, tiger

TRUNG TÂM LUYỆN THI TRẦN ĐẠI NGHĨA HẢI LINH
TÁC GIẢ: ĐINH THANH THÚY
GIÁO TRÌNH MÔN KHOA HỌC - LEVEL 1

words	meaning	explain	example
herbivore	động vật ăn cỏ	sinh vật chỉ ăn cỏ	deer, giraffe
omnivore	động vật vừa ăn cỏ vừa ăn thịt	động vật vừa ăn cỏ vừa ăn thịt	monkey, turtle, ostrich
scavenger	động vật ăn xác của những động vật chết	động vật ăn xác của những động vật chết	vulture, crocodile
predator	động vật săn mồi	động vật săn động vật khác để ăn thịt	lion
prey	con mồi	động vật khác bị động vật khác ăn thịt	deer

3. Câu hỏi trắc nghiệm và bài tập

Exercise 1. Choose the best answer:

Question 1. A lion is a _____ because it eats only meat.

- A. carnivore
- B. herbivore
- C. omnivore

Question 2. A _____ is a producer.

- A. cheetah
- B. plant
- C. grasshopper

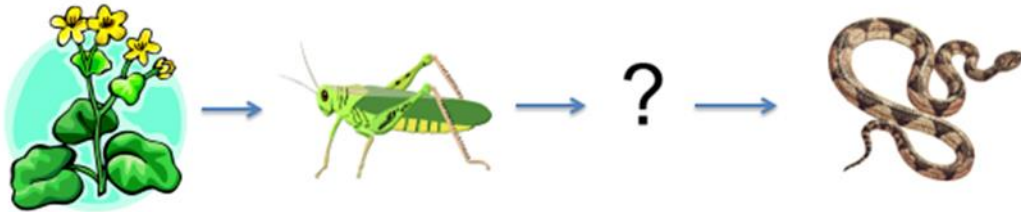

Question 3. True or False ?

A food web can have multiple consumers and producers.

- A. True
- B. False

Question 4. Which animal would fit in the blank of this food chain

TRUNG TÂM LUYỆN THI TRẦN ĐẠI NGHĨA HẢI LINH
TÁC GIẢ: ĐINH THANH THÚY
GIÁO TRÌNH MÔN KHOA HỌC - LEVEL 1

- A. hawk B. zebra
 C. mouse D. butterfly

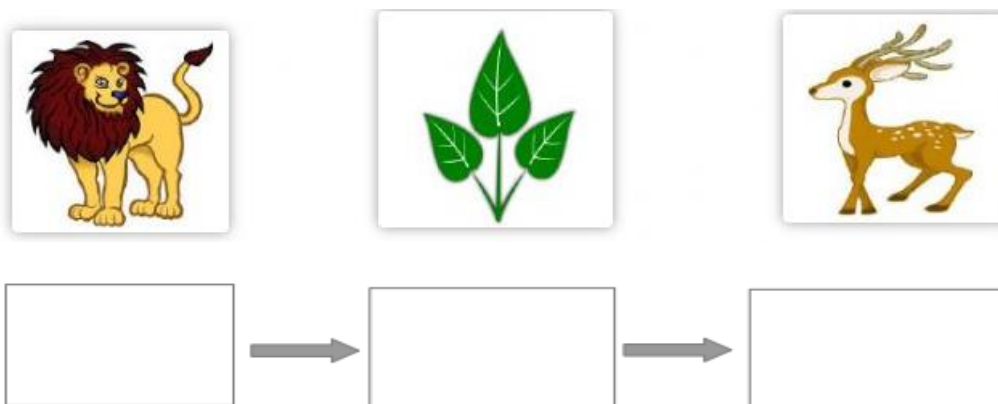

Question 5. The plant gets its energy from the _____.

- A. roots B. stem
 C. sun D. flowers

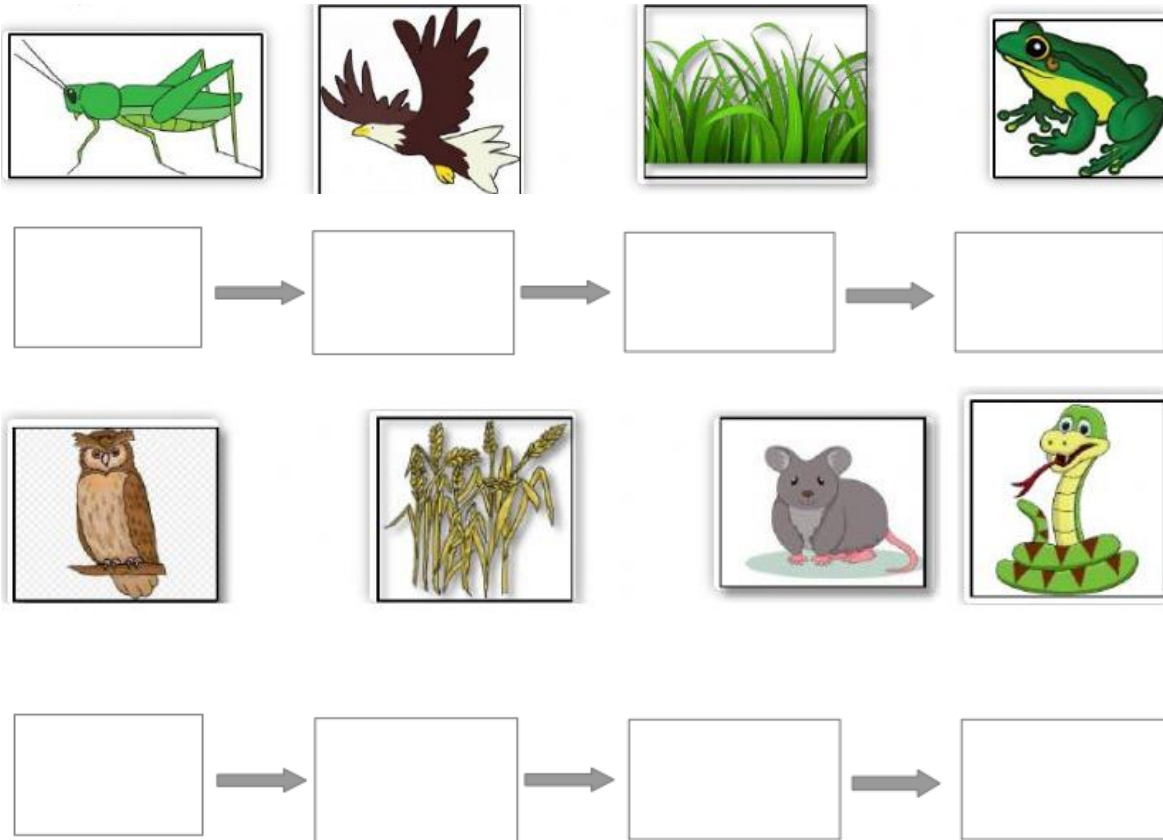

Exercise 2. Use the words from the box to complete the food chains by writing their name below each image:

Lion	Leaves	Deer	Grasshopper	Eagle
Grass	Frog	Owl	Rice	Mouse
			Snake	

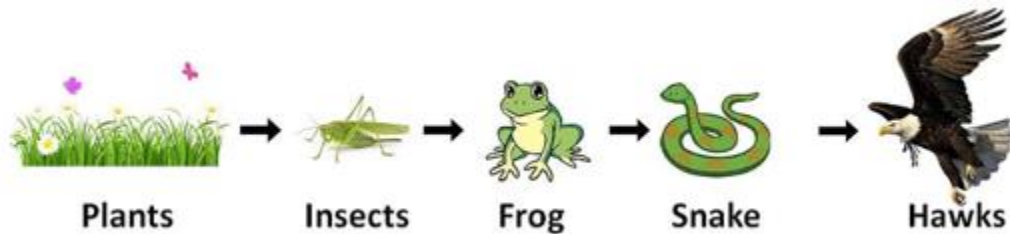

Now, it's your turn to complete the following food chains:

TRUNG TÂM LUYỆN THI TRẦN ĐẠI NGHĨA HẢI LINH
TÁC GIẢ: ĐINH THANH THÚY
GIÁO TRÌNH MÔN KHOA HỌC - LEVEL 1

Exercise 3. Answer the questions about the following food chain:

- What is the producer? _____
- What are the consumers? _____
- What is the primary consumer? _____
- What is the secondary consumer? _____
- What is the prey, snake or hawk? _____

4. Bài tập về nhà

2. Làm các bài tập sau:

Exercise 1. Choose the best answer:

Question 1. Which organism is a decomposer?

- A. grass
- B. mouse
- C. mushroom
- D. caterpillar

Question 2. What is the name of the organism at the beginning of every food chain?

- A. producers
- B. consumers
- C. herbivores
- D. predators

Question 3. Which organisms are the consumers?

- A. deer and squirrel
- B. flowers and deer
- C. deer and mushrooms
- D. squirrel and mushrooms

Question 4. Which organism is a producer?

- A. deer
- B. trees
- C. birds
- D. worms

Question 5. Which food chain is in the correct order?

- A. cat, grass, bird, snail
- B. bird, snail, grass, cat
- C. grass, snail, bird, cat

TRUNG TÂM LUYỆN THI TRẦN ĐẠI NGHĨA HẢI LINH
TÁC GIẢ: ĐINH THANH THÚY
GIÁO TRÌNH MÔN KHOA HỌC - LEVEL 1

D . grass, cat, bird, snail

Question 6. Molds, bacteria, and worms are _____.

- A. decomposers
- B. producers
- C. consumers
- D. food chains

Question 7. Which food chain is in the correct order?

- A. Sun, bird, caterpillar, plant
- B. bird, caterpillar, plant, Sun
- C. Sun, plant, caterpillar, bird
- D. caterpillar, Sun, bird, plant

Question 8. Green plants are _____.

- A. decomposers
- B. producers
- C. consumers
- D. food chains

Question 9. Organisms that eat only plants are _____.

- A. carnivores
- B. herbivores
- C. omnivores
- D. food chains

Question 10. Organisms that only eat meat are _____.

- A. omnivores
- B. carnivores
- C. herbivores
- D. food chains

TRUNG TÂM LUYỆN THI TRẦN ĐẠI NGHĨA HẢI LINH

Question 11. Organisms that eat both meat and plants are _____.

- A. herbivores
- B. omnivores
- C. carnivores
- D. food chains

Question 12. All organisms need _____ to survive.

- A. environment
- B. energy
- C. sun
- D. plants

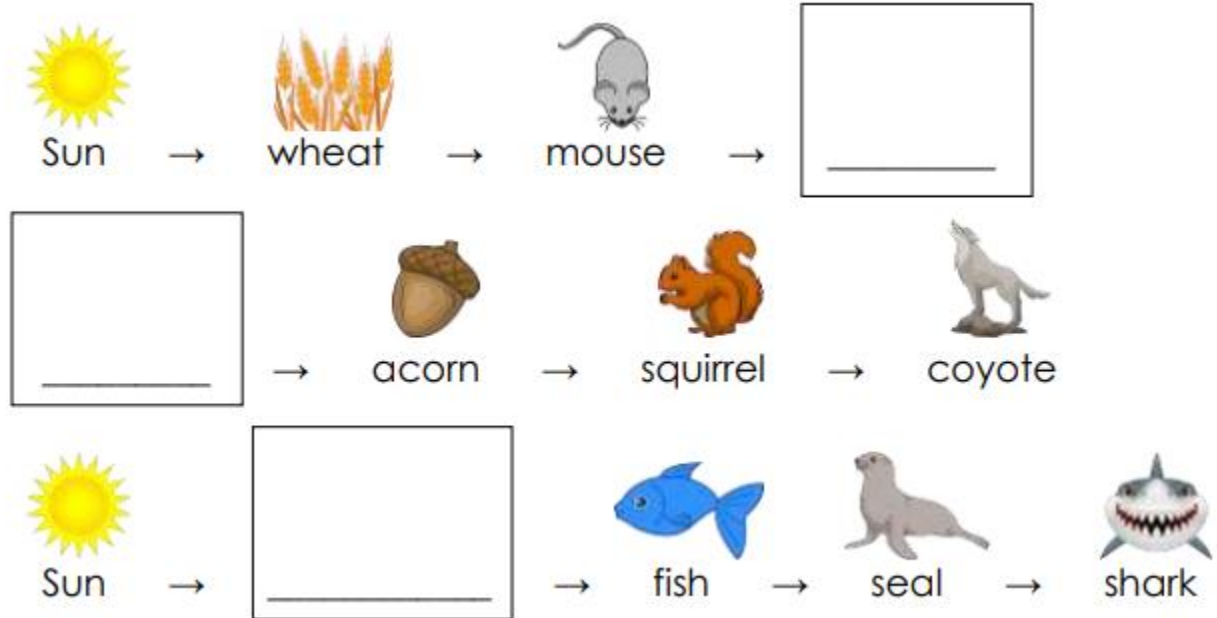

Question 13. The _____ provides all the initial energy to plants.

- A. minerals
- B. sun
- C. moon
- D. water

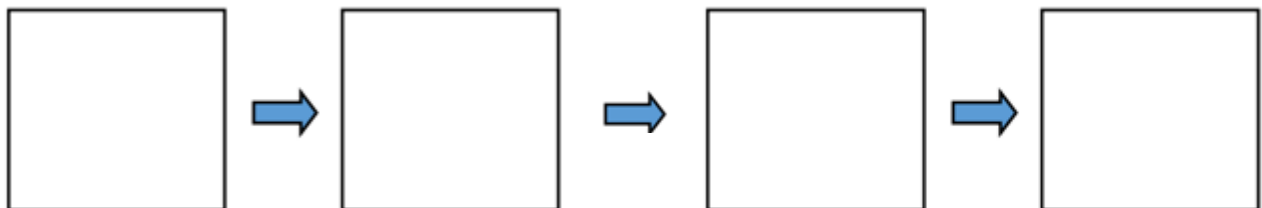

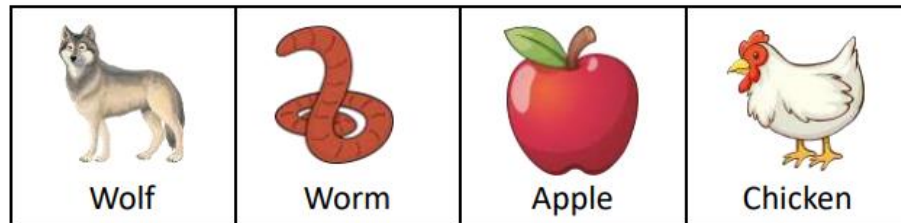

Exercise 2. Use the following pictures to complete the food chains with correct order:

TRUNG TÂM LUYỆN THI TRẦN ĐẠI NGHĨA HẢI LINH
TÁC GIẢ: ĐINH THANH THÚY
GIÁO TRÌNH MÔN KHOA HỌC - LEVEL 1

Exercise 3. Use the given words to complete the food chain:

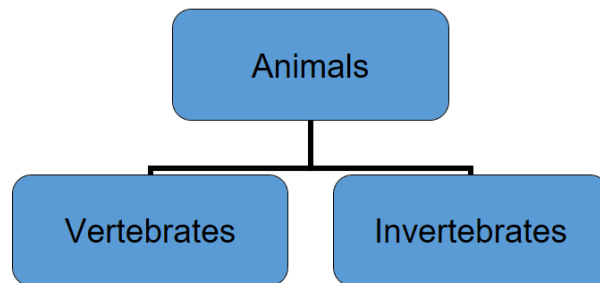

UNIT 16. CLASSIFYING ANIMALS

PHÂN LOẠI ĐỘNG VẬT

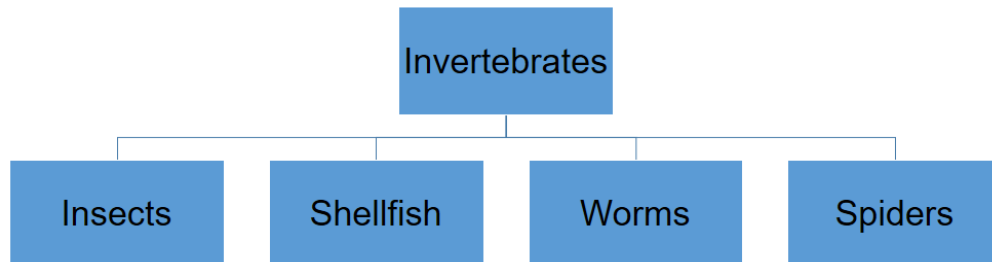

1. Bài học

All animals can be divided into two groups:

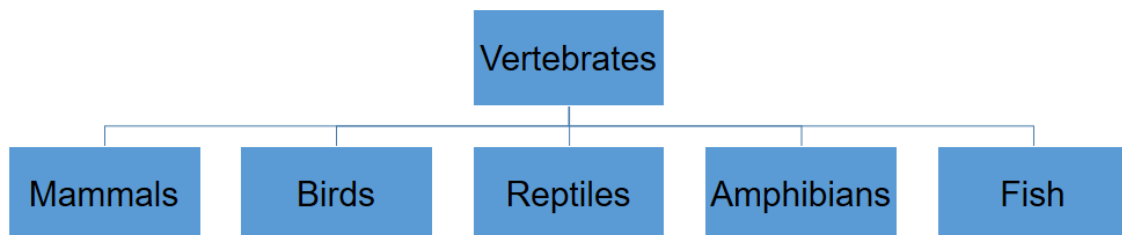

- Vertebrates (animals with a backbone)
- Invertebrates (animals without a backbone)

Most animals are invertebrates. These include insects, shellfish, worms and spiders.

The vertebrate group is divided into 5 smaller groups that are:

TRUNG TÂM LUYỆN THI TRẦN ĐẠI NGHĨA HẢI LINH
TÁC GIẢ: ĐÌNH THANH THÚY
GIÁO TRÌNH MÔN KHOA HỌC - LEVEL 1

Mammals

- Give birth to live young
- Feed their babies with their own milk
- Are covered with hair or fur
- Are warm-blooded

Birds

- Have feathers and wings
- Lay eggs with hard, brittle shells
- Are warm-blooded

Note: not all birds fly!

Reptiles

- Are cold-blooded
- Lay eggs with rubbery shells
- Have dry skin covered with scales

Amphibians

- Cold-blooded
- Lay eggs (in water)
- Have smooth, moist skin
- Are able to live on land as well as in water

TRUNG TÂM LUYỆN THI TRẦN ĐẠI NGHĨA HẢI LINH
TÁC GIẢ: ĐINH THANH THÚY
GIÁO TRÌNH MÔN KHOA HỌC - LEVEL 1

Fish

- Cold-blooded
- Lay eggs
- Have a moist skin covered in scales
- Breathe through gills
- Swim using fins

2. Từ mới

word	meaning	word	meaning
classify (v)	phân loại	feather (n)	lông
vertebrate (n)	động vật có xương sống	brittle shells	vỏ giòn
invertebrate (n)	động vật không xương sống	smooth (a)	láng mịn
insect (n)	côn trùng	moist (a)	ẩm ướt
shellfish (n)	động vật có vỏ cứng	cover (v)	bao phủ
worm (n)	sâu	scales (n)	vảy
spider (n)	nhện	gills (n)	mang cá
mammal (n)	thú	fins (n)	vây cá
reptile (n)	bò sát	amphibian (n)	động vật lưỡng cư
give birth to	sinh con	hair/fur	lông vũ

3. Câu hỏi trắc nghiệm và bài tập

TRUNG TÂM LUYỆN THI TRẦN ĐẠI NGHĨA HẢI LINH

Question 3. Vertebrates that drink milk from their mothers when they are young, have lungs, and have hair or fur are called

- A. Fish
- B. Amphibians
- C. Reptiles
- D. Mammals

Question 4. Vertebrates that can live in the water and on land, lay soft eggs in the water, as adults live on land, and are cold blooded are called

- A. Reptiles
- B. Amphibians
- C. Fish
- D. Mammals

Question 5. Which are two examples of reptiles?

- A. Alligators and Turtles
- B. Turtles and Dolphins
- C. Snakes and Rats
- D. Giraffes and Lizards

Question 6. Which of these are invertebrates?

- A. Snakes and Centipedes
- B. Spiders and Centipedes
- C. Giraffes and Lobsters
- D. Jellyfish and Dolphins

Question 7. Vertebrates that live in water, have gills that help them breathe, take oxygen in through the water and mostly have scales are
